

Release Notes

Release Date

- Sprint 50
- February 11, 2026

New Features

- Platform
 - Added support for unpacking payloads from Pescle light trap. **PEST**
 - Developed a new pipeline to host the processing and inference of the data models. **PEST**

Feature Enhancements

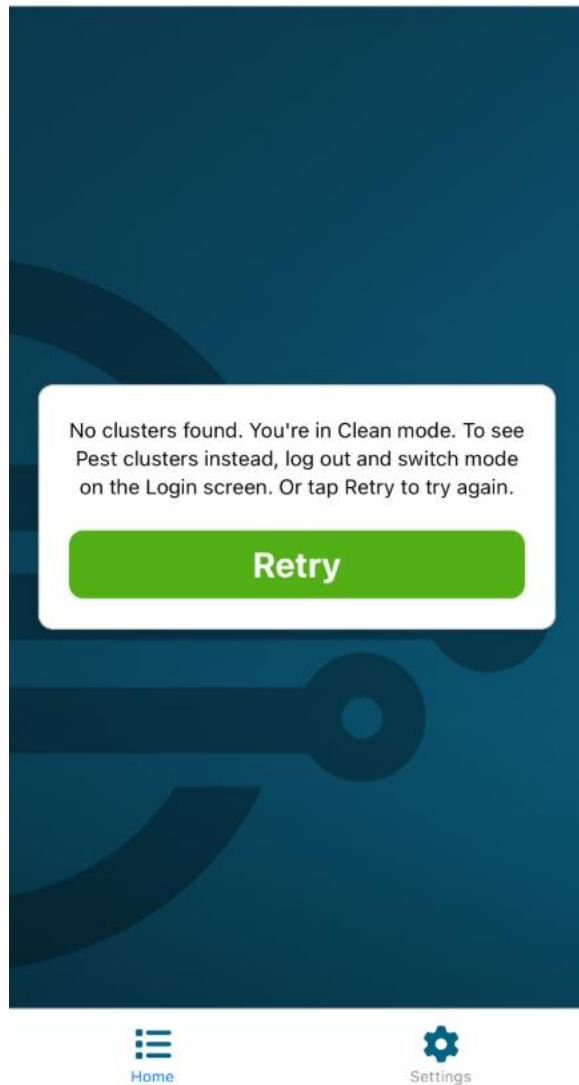

- Platform
 - Manage > Devices now supports uploads for more than 5+ tags.
 - The Tagging schema for default devices and gateways has been improved to make it more user friendly (removal of underscores, the term “your” replaced with “my”, etc.).
 - The ticket system should see an improvement in speed, as we performed a cleaning and optimization of the ticket database. **CLEAN** **PEST**
 - Asset defaults are now recordable in user prefs in /configs to support new Device Cluster settings on Create.
- Deploy-M
 - Filtering now persists across Device Cluster and device navigation to help facilitate installations.
- React-M
 - Flexible text field added to tickets. **CLEAN** **PEST**

Bug Fixes

- Platform
 - An issue with Preferences has been addressed and they work properly again.

- Gateway default name should now be named "gateway" and not "sensor" as this was confusing with the default sensor.
 - Fixed ticket task timestamps: the start field is now correctly suffixed with Z to prevent local-time misinterpretation in the UI. CLEAN PEST
 - Addressed an issue with Gateway data unpacking failing with a missing Temperature field.
 - Fixed an issue in Manage > Devices with DevEUIs edits not updating properly.
- EverSmart
 - Routing: After a recent bug fix the Routing app Routing app was not populating the Assigned to Route column. This has now been fixed. CLEAN PEST
- Self-Signup
 - The account owner now has the role: "admin" set by default. CLEAN PEST
 - After a user signs-up to create an account, their name is now auto-filled on the Finalize Account page. CLEAN PEST
 - Instructions on the last page of the Self-Signup wizard saying to install DeployM while waiting for your sign-in email have been removed as users won't be able to log in with Deploy-M before finishing steps to finalize their account and password. CLEAN PEST
- Deploy-M
 - Fixed an issue where the navState did not persist with first reload after a recent update, so some users ended up logging into app.microshare.io instead of the pest.microshare.io after updating the app. CLEAN PEST
 - Resolved a problem where clicking Save on the existing Device detail info sometimes made it disappear.
 - Fixed an issue where if the device clusters did not load, there was no way to exit the app or get out of that loop.
 - Addressed an issue where a user that owns both Clean and Pest could use their Clean credentials to log into the "wrong" URL (e.g. Pest). They are now shown a pop-up with information to guide them in logging in correctly. CLEAN PEST

Device Clusters

Additional Resources

- Update online Release Notes PDF for Sprint 48/49 January 2026.
- The Routing and Settings help sections have been updated with new terminology.

PEST

CLEAN

Release Date

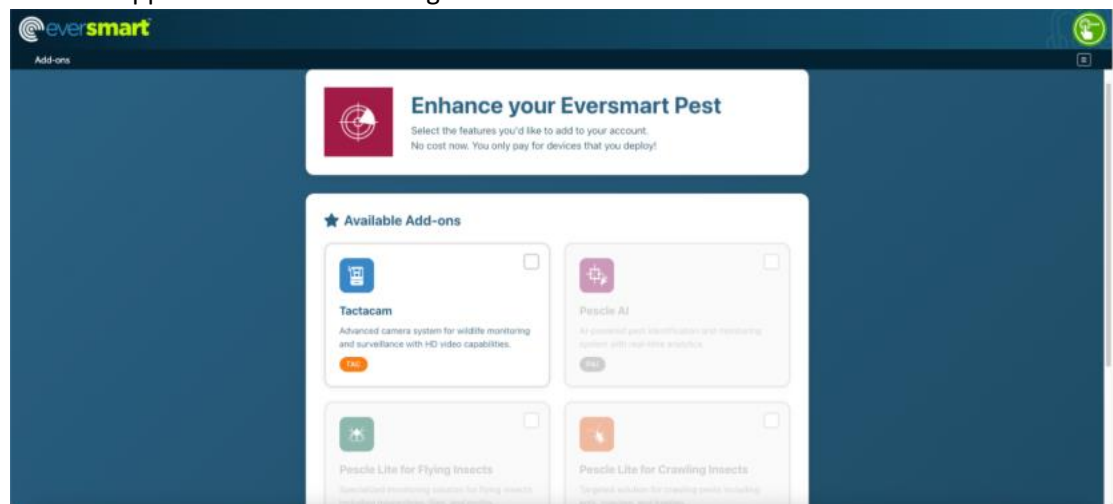

- Sprint 48 and 49
- January 21, 2026

Important

- Go Live for the dedicated EverSmart Pest URL was on December 22, 2025.
- Non-Pest customers, please review all release notes back to May 15 for all relevant changes you'll see in this release.

New Features

- Platform
 - Support has been added for new pest event types (caught, flying, photo, etc.). **PEST**
- EverSmart
 - Routing: Note that we revamped Ticket Details to include the feature previously known as Origin Stats as integrated information inside the Ticket Details screen.
 - Add-ons App created for self-adding Pest features such Tactacam. **PEST**

- Deploy-M
 - Deploy-M toggle button added to switch between Clean and Pest endpoints. **CLEAN** **PEST**

- React-M
 - React-M toggle button added to switch between Clean and Pest endpoints. **CLEAN**
PEST

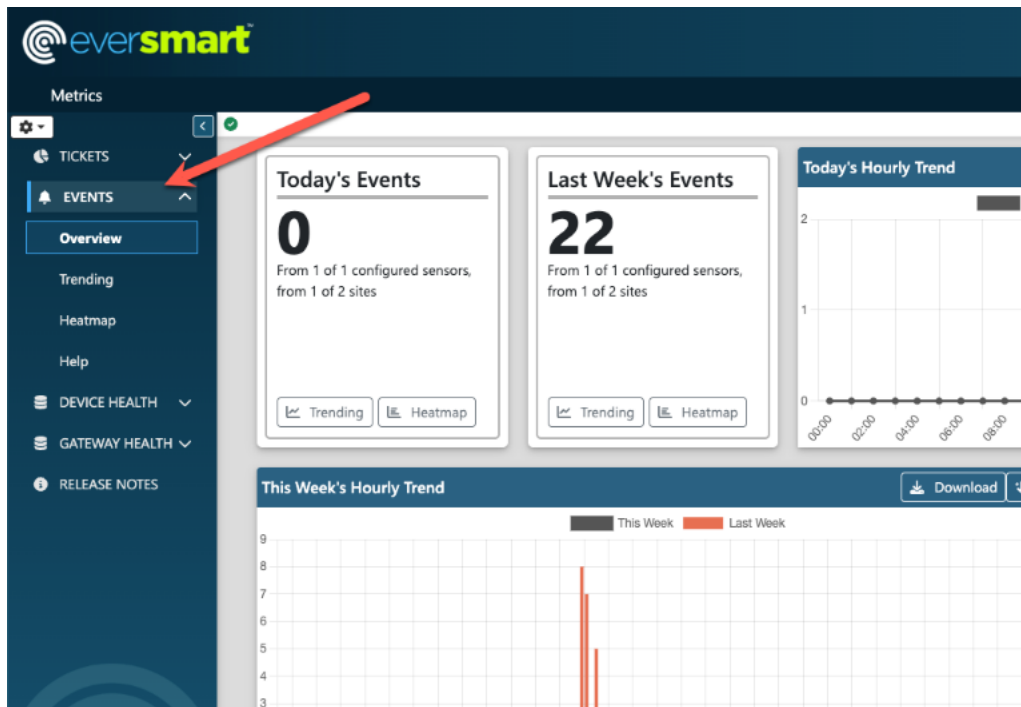

Feature Enhancements

- Platform
 - n/a
- EverSmart
 - Gateway events have been added to the Pest solution. **PEST**
 - Changed the format of the Release Notes displayed on the website and in EverSmart from mark-up .md to .pdf to more easily support screenshots going forward.
 - Routing: Based on customer feedback, the Ticket section sub-tile now displays “Average duration at current stage for all tickets” instead of “age”. **PEST**
- React-M
 - Changed the UX terms for “todos” and “incidents” on React-M to “Tasks” and “Tickets”.
CLEAN **PEST**

Bug Fixes

- Platform
 - Fixed the Composer Asset Download Feature that was not working correctly.
- EverSmart
 - Metrics: The navigation menu folder previously titled "Alerts" is now titled "EVENTS".
CLEAN **PEST**

- o EverSmart Routing app cleanup including **CLEAN** **PEST**:
 - Overview styling - Ticket Creation Trend graph is no longer cut off.
 - Two references to dapi are now fixed - in fetchTechnicianFeedback and fetchHistoricalIncidents.
 - Removed extraneous code in TicketOverlay and subcomponents.
 - Ad hoc events now include GPS locations.
 - Fixed the message on the map tab when there are no tickets, or they are all filtered out.
 - Fixed an issue where the account creator gets created with one profile, then "Add Myself as a User" created a second profile.
 - Resolved the error "Selector unknown returned a different result when called with the same parameters..."
 - Fixed a crash when clicking on historical ticket data.
 - Updated the Refresh making sure auto refresh is still running, including right after Create Work or Submit mock event and included a Refresh button.
 - Fixed Download for Tickets which wasn't downloading assignees correctly.
- o Routing: now after creating ad hoc work, the typed in instructions should appear in the ticket. **CLEAN** **PEST**
- o Routing: The layout of the Ticket Details screen is now correctly responsive. **CLEAN** **PEST**
- o Routing: Fixed an issue where if one incident encompassed multiple events - some with geositions and some without, then the incidents were not always registered as having a location. Now both tickets should be visible on the map. **PEST** **CLEAN**

- React-M
 - ReactM: Fixed an intermittent Android crash happening within 5-10 sec of starting the app.
 - ReactM: The Microshare copyright should now be visible on Android.
- Self-Signup
 - We now create a default profile with the First and Last Name from the checkout portal.

=====

Release Date

- December 11, 2025

New Features

- Platform
 - Composer Device Cluster now supports expanded DevEUI formatting such as is used for Tactacam devices.
 - Updated Pest wizard app facts for the Metrics app to include Explain buttons by default.
 - Pluggable LLM API Endpoint for unifying Smart Features.
 - Photo and image upload capability for Mobile Apps.
 - Added support for Amazon-specific Content-Types to RestfulAPIServices to support Tactacam authentication.
 - Composer “Cards” view: Users are now able to filter by multiple values.

- EverSmart
 - Added support for merging gateway alert handling into "regular" routing / settings.
 - The Metrics app can now be configured to visualize data from the following Hagleitner devices: sanitizer, soap, handtowel, toiletpaper.

Feature Enhancements

- Platform
 - Added a new pest bundler: io.microshare.event.alert.gateway.
 - Updated the Pest gateway usecase from GATEWAY to SC05GW.
 - Added a rectype and robot for the new bundler: io.microshare.event.alert.adhoc.
 - Alert support for Tactacam Reveal series trail cameras.
 - Unpacking support for Pescle Lite series cameras.
 - We now allow dynamic values for incidents from alert data.
 - Trained machine learning models using aggregated event data.
 - Unpacking support for Tactacam Reveal series trail cameras.
- EverSmart
 - Established the correct pattern for manual Tactacam setup:
 - Need to create a proper DC with both custom device type (Tactacam Reveal)/network server (Tactacam API)/usecase SC08.
 - Add bundler robot for recType io.microshare.event.alert.gateway.
 - Routing:
 - Now always includes "Create Work" as button.
 - Switched "map" to be a tab.
 - EverSmart: Now hides "Field" selector when there is only a single option.
 - Events Overview page (previously known as Alerts Overview) no longer includes an extraneous "Device Maintenance" box or extraneous "Show All" / "Hide All" buttons in graphs on page.
 - Alert rodent data is now visualized as event "counts" not "events"
 - Increased incident retrieval limit in asset view to expand list size in Routing app and ReactM.
 - All Device Health dashboards now include three additional fields to help with reporting which gateways are forwarding packets:
 - Gateway Count
 - Gateway LRR-IDs (only visible when "Show advanced fields" is ON in the Settings)
 - Gateway Base Station Name (only visible when "Show advanced fields" is ON in the Settings)
 - Explain button has styling to match EverSmart skin. Now allows Print and Download as PDF. Improved AI prompting to emphasize graph/chart descriptions to supplement the data analysis.
 - EverSmart: Terminology and other UI changes
 - "incident" should be called "ticket"
 - "todo" is now "task"
 - The "Kanban" tab should now be labeled the "Tickets" tab

- “alerts” should now be called “events” and the word “alert” should be used to mean notification
- “event” is the activity from the sensor OR the output from "Create Work" button
- "Roster" should now be called “Route”
- Removed the "Time" dropdown and default to the timezone of the data
- Removed the "Refresh" button
- If the user logged into one org manages to open a dashboard that belongs to a different org, then the error message will now show the user-facing label of the org instead of the org name.
- Added a method to prevent data from different sensors from mixing in the data retrievals for the Device Health dashboard.
- Gateway Health: We now auto-resolve an incident when a "reconnect" alert is received.
- Routing: Introduced visualization for closed tickets, including per-location views and historical ticket context within ticket details.

Historical Incidents (Cedarwood Corner)

Bug Fixes

- Platform
 - Relaxed the BaseEventHandler checking for fport/fcnt to support Agents that are not LoRaWAN based.
 - Introduction of the solution field in the filtering for the notifier. A notification rule from a solution shouldn't impact an other solution from now on.
 - Devices - Fixed an issue that resulted in a greyed-out screen when clicking "Edit Multiowner Attribution".
 - Addressed a problem where a Device Cluster change appeared saved, even when the Back button was clicked instead of the Save button.
 -
- EverSmart
 - Trending and Heatmap: Fixed an issue with the Trending and Heatmap Buttons not working on the first load of the page.
 - Fixed an issue where extra rodent events sometimes got inserted into data.

- Settings App: Downloading now reliably includes label for "Locations" column.
 - After a user has been deleted via the Settings app, tickets assigned to the deleted user should still show the deleted user's email address in the Routing app.
- React-M
 - Fixed an issue with Roster listings showing as empty in React-M.

Release Date

- October 29, 2025

New Features

- n/a

Feature Enhancements

- Platform
 - The unpacked data and device health data now includes more device cluster meta data in the data.meta.dc field, including the device type, configured usecase, originating device cluster id and recType.
 - Added “Kill trap” monitoring to recognize when a rodent does not leave a box.
 - Incidents handle bundling in a better way to avoid cross solution bundling.
 - The pictures taken by the Tacticam are now available in the Routing app, inside your incidents.
 - The images from Tacticam cameras are now available in the Insights emails.

Dear Julien Bardin,

Rodent Activity Patterns Analysis

This report analyzes the rodent activity levels at various locations over the past two weeks, focusing on time-based usage patterns and site-specific behaviors.

Key Activity Images

The following images show the most important activities detected this week:

Key Insights on Rodent Activity

Rodent activity tends to peak during late night and early morning hours, with notable usage throughout specific sites such as Traffic Center and Willowbrook Junction. The presence of food sources significantly influences the frequency of rodent encounters.

Bug Fixes

- Platform
 - Fixed an issue where UK SMS recipients received messages from our US number instead of our UK number.
 - Patched an issue where the Smilio agent was not producing business events due to change to placement of backboard in shareRec .

Ops

=====

Release Date

- October 8, 2025

New Features

- Platform
 - Created an app to produce AI generated insights using customer data.

Feature Enhancements

- Platform
 - The "insight" and "report" fields are now passed from the Bridger to the Notifier, enabling richer notification templates.
 - We now use a process "deep" variable to put a lock on the update of an Incident to avoid stuck Incidents.
 - Added the capability to send "insight" notification (insight email) through the Notifier.
 - Updated tests to handle Profiles with multiple push tokens.

Bug Fixes

- React-M
 - Incidents are now updated based on any roster change.
 - Enhanced flow for “Mark all tasks complete” and “Complete the incident” in the same flow.

Ops

=====

Release Date

- Sprint 43
- September 17, 2025

New Features

- React-M
 - A Reset Password feature has been added to the React-M login screen.

Feature Enhancements

- Platform
 - Incident and notification events now include more timing details at the completion level and location data for better tracking and analysis.
 - Device Clusters now include GPS info in the CSV extract.

- The backend of the incident system will now transform any input email into lowercase to avoid uppercase characters causing issues in the downstream use of the incident system.
- Deploy-M
 - Upgraded DeployM to Android API Level 35.

Bug Fixes

- React-M
 - DEV-2012– Fixed the ReactM 400 Error when completing a task.

Ops

=====

Release Date

- August 27, 2025

New Features

- Platform
 - Added support for bundling gateway incidents and configuring notifications.

Feature Enhancements

- Platform
 - Composer Device Clusters now show and map with marker realignment capability.
 - We now capture geolocation using our standardized data format and provide it inside the incident data. This will help our different products to access the geolocation of these incidents.
 - Added new Pest and workflow assets for Pest 2.1.
- EverSmart Pest
 - Metrics: The Explain This modal dialog has been added and made more engaging, available upon custom config.
 - Settings: In Settings users with pending invites now show as “(pending)”.
 - Routing: improved handling of upper cases email addresses as assignee.
 - Metrics, Settings: Improved display of bold fonts.
- React-M
 - Revamped user experience for easier access to priority vs routine tasks. Released a new feature to mark all tasks complete in one go. Added new incidents details helpful for the users such as priority number from low to high priority.

Bug Fixes

- Platform
 - Fixed an issue where the Gateway Agent only produced a disconnect alert for the FIRST unpacked record it processed for a device.
 - Fixed the use of parameters in the Views page.
- EverSmart Pest
 - Metrics: EverSmart Incident - Age in Minutes is no longer empty when an incident is closed and now displays calculations based on how long all relevant incidents were open.

Ops

- Ops
 - Fixed Robot Pod restart.

Additional Resources

- Documentation
 - Updated screenshots in Settings Help file doc that showed "Rodent" instead of "Pest".
 - Updated Rodent ES > Alerts > Help > Eversmart Rodent Dashboard User Guide - that referenced "Rodent" in the document title, etc. instead of Pest.

=====

Release Date

- August 6, 2025

New Features

- EverSmart Pest
 - Settings, Routing: Added the capability to add a data source to the Settings/Routing app through app facts.

Feature Enhancements

- Platform
 - Incident time-escalation is now optional via the bundler config under `config.escalation.active true/false`.
 - Added support for bundling gateway incidents and configuring notifications.
 - Added the geolocation of origin alerts in the incident data.
- EverSmart Pest
 - Metrics: Improved the fields displayed for EverSmart "Incidents":
 - Show incident priority (relative or absolute) in "all" of the incident dashboards.

- Revised the ordering of the stages to make it clearer how things are meant to flow.
 - Metrics: Added the following capabilities to the Tables in EverSmart:
 - Pagination for tables with more than 10 rows.
 - Ability to collapse/hide whole table.
 - Added a Search bar.
 - Metrics: Changed the word "device" on the Overview for gateways to "gateway".
 - Settings: Clarified help text in Settings > My Profile > Language > Edit.
 - Metrics: EverSmart left navigation pane is now collapsible.
 - Settings: Updated the Settings app styling for users / rules to make active ones more visually distinguishable.
- React-M
 - ReactM now provides split priority queues:
 - Incidents can be nominal, low, medium or high priority.
 - It allows split views for Critical and Routine tasks.
 - It allows configurable split levels eg. Critical >= medium.
- Deploy-M
 - Added a password reset feature to Deploy-M.

Bug Fixes

- EverSmart Pest
 - Routing, Settings: The Routing/Settings sticky toolbar now behaves properly on small screens.
 - Metrics: When there are distinct taglabel sets referenced in one app, we now ensure each one displays correctly.
- React-M
 - The Complete logic flow now fully resolves the ticket.
- Deploy-M
 - Fixed a possible crash in the QR Code Scanner.
- Wizard/Composer
 - The use of parameter in the View page has been fixed.

=====

Release Date

- August 4, 2025

New Features

- Platform
 - Created an agent to produce alerts for disconnected gateways.
 - Added time zone annotation for GPS enabled data.
- EverSmart
 - An AI-powered “Explain” button is available for configuration for EverSmart dashboards.

Feature Enhancements

- Platform
 - Geolocation is now passed along the streaming pipeline from packed to unpacked and in the proper format.
 - Create a data frame ready for machine learning ingestion for Rodent false positives.
 - API now allows regex .* in patterns for the persistence.collection configurations.
 - "Breadcrumbs" for the originating records for a given record in the pipeline are now output in a standard way to an array - the "sources" field. This was completed for agents, snapshots, and incidents.
 - Remove the notification threshold and title (incident/notification) and notification body from incidents.
 - Add a "test only" option to the View page so it doesn't need to save the view to test it.
- EverSmart
 - The toolbar at the top of Routing (Kanban) and EverSmart is now “sticky”.
 - The Origin Stats button within the ticket details page now shows aggregated origin data so that origin data is more easily readable by the user.
 - Added a locale/language preference to Settings > Profile.
 - Rodent now uses solution “Pest” throughout the architecture and documentation.
 - Admins are now able to remove a user’s access from the org via the Settings app.
 - Added the ability to view Gateway Health and connectivity in Device Health or Metrics as configured via the App Facts.
 - Incidents is now the first folder in the Metrics Dashboard.
 - Parent Tags for dashboards have been updated.

Bug Fixes

- Platform
 - Addressed an issue where Search in Device Cluster by DevEUI was not working.
 - Resolved an error when running a match/fetch query in Views.
- EverSmart
 - Various fixes and improvements including:
 - Fixed suggested tags missing in Routing - ticket title on Kanban board AND in Ticket Details and the EverSmart - table at top of the Trending view.
 - Routing > Filter by Location > Locations are no longer collapsed by default.

- Resolved an issue with some “malformed” tickets in unexpected formats.
 - Fixed the Save filter in the Incident Manager.
- Admin role and "isAdmin" should now work the same to invite/edit/query users in the Settings > Users table.
- Various small fixes including:
 - Move "Maps" tab from Metrics to Device Health.
 - Removed Open Incident Status and Closed Incident Status in "incident".
 - Added help file for gateway health.
 - Generated inline help for gateway and incident fields.
 - Changed rules for currently logged-in user - does not update rules on “My Profile”.
- Settings app no longer shows empty "Notification Sensitivity" in Rule Editor when solution is set to "pest".

Additional Resources

- Web Documentation
 - Documentation for the Quick Start > Create an Account topic has been updated.

Release Date

- June 25, 2025

New Features

- n/a

Feature Enhancements

- Platform
 - Pest Incident Templates for email, SMS and push notifications are now available in English, Norwegian Bokmål, French and Spanish language formats.
 - We’ve improved the tagging of incident tags based on their bundling level.
 - We’ve changed the origin alert tags to device/global in the incident.
 - More alert details are now provided in the incident notifications.
 - The isAdmin = admin logic now applies to the API via the Policy Fabric.
 - Added Smart management of thresholds and the capture of timing of threshold milestones, so the timing of when a threshold has been reached is visible in the incident share record.

- Created a pipeline to generate gateway health records that can be consumed by EverSmart Device Health.
- EverSmart
 - The toolbar at the top of Routing (Kanban) and EverSmart is now “sticky”.
 - A new button within the ticket details page now shows aggregated origin data so that origin data is more easily readable by the user.
 - Added a locale/language preference to Settings > Profile.
 - Rodent now uses solution “Pest” throughout the architecture and documentation.
 - Admins are now able to remove a user’s access from the org via the Settings app.
 - Added the ability to view Gateway Health and connectivity in Device Health or Metrics as configured via the App Facts.
- Deploy-M / React-M
 - ReactM and DeployM have been upgraded to Expo 53.
 - Added Tactacam scan and picture to Depoy-M.
 - Added a password reset feature to Deploy-M.

Bug Fixes

- Platform
 - Addressed an issue with Smilio history not getting re-read when an agent was restarted.
 - Fixed an issue where several Device Cluster could unexpectedly appear to be shared with the user.
 - Network decode for MachineQ work-around empty string for numeric fields
- EverSmart
 - Various fixes and improvements including:
 - Fixed suggested tags missing in Routing - ticket title on Kanban board AND in Ticket Details and the EverSmart - table at top of the Trending view.
 - Routing > Filter by Location > Locations are no longer collapsed by default.
 - Resolved an issue with some “malformed” tickets in unexpected formats.
 - Fixed the Save filter in the Incident Manager.
 - Admin role and "isAdmin" should now work the same to invite/edit/query users in the Settings > Users table.
- Deploy-M / React-M
 - Fixed a crash in the Deploy-M QR code scanner.

Feature Enhancements

- Platform
 - The Invite to the platform timeout has been extended to 1 week.
 - We've moved the Incident system into a plugin-based system to improve performance.
 - We've moved the Priority Management system into a plugin-based system to improve performance.
 - We've moved the Notification Send portion of the Incident Workflow system into a plugin-based system to improve performance.
 - Notification events are now sent upon the auto-resolve and on the staff-resolve of an Incident.
 - Consolidated the notification formats for invites, password resets, and new account welcome emails.
 - For EverSmart Clean, to better understand the level of activity in a washroom, we've added a Tag to allow users to state the number of stalls within a washroom.

Bug Fixes

- Platform
 - Fixed a difficult to reproduce issue in Rodent with time out errors that caused an indication of a connectivity problem in IoT Monitor.
 - Fixed an issue where adding new users via the Settings app did not preserve their roles

=====

Release Date

- May 15, 2025

New Features

- EverSmart

- Added support for "suggested tags" feature to Routing / ReactM. "Suggested tags" are a new feature where DeployM can "suggest" tags for certain tag levels for certain use cases.

Feature Enhancements

- Platform
 - Auto-resolve or Staff-resolve is now a config parameter of the bundler.
 - Clean 2.1 Notifications are upgraded for both Incidents and Alerts covering email, sms, and ReactM push notifications with more detail.
 - Notifier templates now align with auth invite/reset/welcome emails.
 - Moved the incident priority management system into a plugin.
 - Duration for invitations is extended to 1 week, duration for password resets is extended to 1 day.
- EverSmart
 - Renamed default label for 4th tag from "Asset" to "Placement".
 - Fix so that the "root" account no longer shows up on every incident in the Routing app and now only human "assignees" should be visible in the Routing app.
 - Improvements to user handling "no name" users. In places where "FirstName LastName" is displayed, then the user_id should be displayed. In places where "FirstName LastName <user_id>" is displayed, then the user_id should be displayed.
- React-M
 - Replaced the labels in ReactM to say incident and not tasks nor todos nor tickets.

Bug Fixes

- Platform
 - Fixed issue with new user invited by admin getting error upon accepting invite.
 - Investigated cause and improved handling of "stuck" incidents.
 - Fixed an issue with the Create Account page in Microshare where the "special character" checkbox was incorrectly checked off by using just a number and then the create account button would not enable.
- ReactM
 - Fixed a refresh token issue where users were seeing an error when they visit the app again after a long period of time.

Additional Resources

- Documentation
 - Various updates to documentation, help files and tutorials have been made for the Clean 2.1 release.

Release Date

- May 14, 2025

New Features

- n/a

Feature Enhancements

- EverSmart
 - Users can now download a log of staff arrivals from EverSmart. This is recording the arrival of staff to resolve issues or inspect washrooms.
 - An Overview page has been added to the Routing app.
 - Updated styling of the Routing app to match more the Eversmart and Settings app styling.
 - The "name" field for configs generated by Settings is now more meaningful.
 - Updated the Settings app to use a typeable character to delineate the "locations path" so that a user can type in the whole path on the Test Notifications and Create Work pages.
 - UI updated to simplify EverSmart Works and roll into EverSmart Clean as a new section called Incidents.
 - Various improvements to the UI and layout of the Routing app.

Bug Fixes

- Platform
 - Addressed a problem with Agents logging STOPPED when not required to do so.
 - Fixed a bug with Agent data being unpacked but not transformed.
 - Fixed a bug with adding and removing devices.
 - Addressed an issue with the drop menu UI for Organization, etc. being cut-off in the Manage view.
- EverSmart
 - Switching from relative to custom time duration now processes Data Loss properly.
 - Fixed font for EverSmart Clean > Feedback > Trending > Feedback Summary > Feedback Summary > Feedback Percentage column which was much larger than for other columns in the table.
- DeployM
 - Fixed an issue with the scanner showing a white box when tapping Rescan and navigating to the scanner screen.

New Features

- n/a

Feature Enhancements

- Platform
 - Various general and Haglietner-specific Unpacker Improvements have been implemented.
 - Updated API share POST to allow name/desc setting in body.
 - Created a Lib Decoder for Kerlink Cockpit Gateway Status records.
 - Created a Network Server Decoder for Kerlink Cockpit Gateway Health format.
 - Updated bootstrap & jquery lib versions in composer & app-svc.
- Wizard
 - Update Wizard and Composer so "Network Provider" is set to "Activity ThingPark".

Bug Fixes

- Platform
 - Fix made to better handle Roster updates.
 - Fixed an issue with the Organization menu when on the Manage pages.
 - Fixed a problem with Manage > App > Facts not being saved on creation or update.
 - Fixed and issue with Manage > Rules not saving scopes.
- DeployM
 - Fixed an issue in Deploy-M where a user would find a specific device, then tap on the device and it would bring up a different device instead.

Additional Resources

- Documentation
 - Various new and updated documents have been added to the public documentation area on the website for Tab Motion and Open/Shut Sensors, Skiplly Clock-E devices and iFemtocell Gateway hardware.

=====

Release Date

- March 12, 2025

New Features

- n/a

Feature Enhancements

- Platform
 - "CC Admin on Create User" email template improved to specify the user account that the email link will activate.
 - Outbound POST calls from a robot can now set 'Content-Type'.
 - Added feature to allow users to filter the Device Cluster by DevEUI or location.
- Wizard
 - Added a leading space to the front of the name in the Eversmart Clean wizard to force the Suite App to prioritize the EverSmart Clean app.

Bug Fixes

- Platform
 - Fixed an issue with legacy v1 unpackers pods running branch v1-unpacker feeding from records created by ingest into obj_packed topic.
- EverSmart
 - Fixed Rodent Overview page to show current week's data properly when there are no alerts.
 - Fixed error with Settings > My Profile > Add Myself as User button.

=====

Release Date

- February 19, 2025

New Features

- n/a

Feature Enhancements

- Platform
 - Improved the displayed message for bad guest links.
- EverSmart
 - In-line help has been added to all of the column headers in multiple EverSmart Dashboards.
 - The Device Health "Issues" column is now “iconified” and display icons such as “wrench” for unconfigured devices that a user can click to see a dialog with more info on each issue.
 - The Device Health - Data Loss Column has been improved to help users better understand the information being provided and reduce the anxiety and concern users are experiencing when viewing the data.
 - The Device Health - Overview page - Basic View has had the number of columns shown to users reduced to mitigate any possible customer confusion and unnecessary concern.
 - EverSmart now displays "category" bands on graphs.
 - Various Touch Free Feedback Improvements including use of injected token window.accessToken, use of injected backboard ID, converting from using loc1, loc2,... to using an array, Output alert event AND meta event, update header to display the EverSmart header, upgraded JQuery to the latest and added support for SR01 vs SF01 - now both are supported.

Bug Fixes

- Platform
 - Support has been added for Touch Free Feedback to the App-Svc codebase.
- EverSmart
 - Improved the battery consumption level values being used for the Skiplly Clock-E devices in EverSmart.
 - Improved the battery consumption level values being used for the Tabs Open/Close sensors in EverSmart.
 - Improved the battery consumption level values being used for the Skiplly Smilio-S devices in EverSmart.

Additional Resources

- Documentation
 - Add links to in product documentation files to doc site.

- EverSmart Release Notes: Solution needed to have in-product Release Notes point to online Release Notes to have a single point of truth and maintenance.

Release Date

- January 29, 2025

New Features

- n/a

Feature Enhancements

- React-M
 - Various React-M improvements including auto sign-in with face ID, the ability to select “No Tour”, and better ticket UI among other changes.
 - React-M is now available in beta form for Android users.
- Smart Office Masters
 - TheTrending and Realtime forms have been updated to use Window.accessToken now provided by the App service.

Bug Fixes

- Platform
 - SMS exceptions cause other notifications to fail. Failure to send SMS to one user for any reason (invalid phone number etc.) was throwing an exception and the other users in the list were being skipped. The fix just logs any failure and the notifier walks the list to send SMS to remaining users.

Release Date

- November 27, 2024

New Features

- n/a

Feature Enhancements

- Platform
 - The Wizard has been updated to set the use case of gateway for all rodent solutions to GATEWAY. This will allow DeployM to show gateway specific tag labels.
- Eversmart
 - Settings App: New Rules should default to listen for incident alerts - event: "incident_start".
 - New notification rules are now created by default to notify the user when an "Incident" is "Created". This means that the first time an alert (like a rodent presence prediction) occurs, the user is notified, but they will not be notified for subsequent alerts at that same location until the incident is resolved (for example, times out).
 - Grouping multiple alerts into a single incident (where it results in a single notification) is called "bundling". The user can instead opt to be notified when individual alerts occur by choosing "Rodent Alert" instead.
 - In the past, users could ONLY listen for the creation of the bundled incident. This type of notification rule used to be shown in the Settings app as "Rodent Alert". Now that we differentiate between listening to the bundled "incident" vs listening for individual alerts, we have updated the meaning of "Rodent Alert" to mean getting notified for individual alerts. This means that in order to achieve the same functionality that our users previously experienced, we have updated all existing "Rodent Alert" rules to "Incident Created" rules.
 - Routing App: After performing an action on an incident, the loading spinner is now displayed only on the incident and the rest of the Routing app remains usable while the action gets processed in the background.
 - Settings App: Added an option to Settings for an Admin to be CC'd on user invitation/creation for single and bulk invites to the platform.

Bug Fixes

- Platform
 - SMS exceptions no longer cause other notifications to fail.

Additional Resources

- Documentation
 - EverSmart Rodent online help has been updated.

Ops

- n/a

Release Date

- November 6, 2024

New Features

- n/a

Feature Enhancements

- Platform
 - The User Creation API now allows the creation of an admin email to be CC'd on invitation emails.
 - Our /config endpoint now interprets “rules” consistently based on a combination of input of solution-type, alert-type, event-type, and locations array, factoring both asset account product default rules and at least one organizational override config record.
 - The Manage > Configs section now supports a JSON editor for creating, reading, updating, and deleting records.
- EverSmart
 - Settings dashboard > Test Notifications tab has been removed pending a redesign of the feature.

Bug Fixes

- Platform
 - Under the Manage > Devices > Registered Devices section, we now indicate the sort order of the Device ID and Location Tags columns.
 - When clicking Cancel after editing in Manage > Devices > Registered Devices, changes are properly discarded as expected.
 - Text for long Org names displayed on cards under Manage > Apps no longer overrun the boundary of the cards.

Ops

- n/a
-

Release Date

- October 16, 2024

New Features

- Platform
 - An unpacker for the Xibu Hagleitner level sensor has been created.
 - The Xibu Hagleitner Paper Towel Sensor has completed the development certification process.

Feature Enhancements

- Platform
 - The processes API has been enhanced to retrieve all details within a Task.
- EverSmart
 - The Exit to Console menu item is only displayed to Microshare users and admins.
 - By default, Exit to Console should now be available for:
 - users whose email ends with @microshare.io
 - users whose email begins with "ms_admin@"
 - users whose email begins with "root@"
 - users whose isAdmin is true
 - users whose roles contains "admin"
 - If hideExitToConsoleForAdmin is set to true, then Exit to Console should ONLY be available for
 - users whose email ends with "@microshare.io"
 - users whose email begins with "ms_admin@"
 - users whose email begins with "root@"
 - EverSmart Devices:
 - In the UI, in the "Summary" tiles on the Overview page and in Device Health, we have updated the description/naming of un-twinning devices to better reflect their status. Un-twinning devices are no longer classed as "Unhealthy" by default. The devices are now described as "Unconfigured". This will aid new users in understanding the information being displayed to them.
 - Only devices with issues e.g. low battery will now be described as Unhealthy.
 - These were the devices previously set-up with the "dummy" devEUI 00-00-00-00-00 (aka "unconfigured devices"). See in-app Help document for more details.

Bug Fixes

- Platform

- Identities in the Composer > Switch Org dropdown are now listed alphabetically.
- When viewing the Composer > Forms > Info slide-out (i), the Owner, Imported By, and Created By fields are now filled in.
- The Composer > App Update screen now displays the standard Update App surround and shows the app id with Copy-to-Clipboard enabled.
- Composer > Keys auth access for an account no longer incorrectly persists across a user signing out and signing back in as a different user.
- The Device Cluster > Quick Update loading icon now appears when expected.
- When clicking the Composer > Device Cluster > Network > Create button only a single call is made now. This improvement has been made in order to reduce the load on the server and time on the browser to populate the drop-down.
- The API has been updated to automatically remove trailing spaces in all location tags (e.g. Loc1, Loc2, Loc3, Loc4) for devices in a Device Cluster.
- EverSmart
 - When refreshing an EverSmart app within the Suite app, the active page is now preserved.

Release Date

- September 4, 2024

New Features

- n/a

Feature Enhancements

- Platform
 - Composer Search functionality is no longer case sensitive.
 - Console allows escape from forced suite app start.
 - Rule Editor now has "Configs", "Profiles" and "Streams" in the "RESOURCE TYPE" dropdown.
 - When deleting a device in a Device Cluster, the prompt upon clicking Delete now includes the [device tags](#).
 - The search functionality of Composer has been updated and expanded with the ability to search on the Dev EUI.
 - The Device Cluster CSV upload format no longer requires only [semi-colons](#) and now accepts comma delimited CSV files as well.

- EverSmart
 - Implemented a bulk user upload feature in the Settings app to assist in adding large numbers of users.
- DeployM
 - The “Scan a real device” prompt message in Deploy-M has been updated to “! Scan a physical device’s QR code” this is intended to assist users in understanding the next action to take when starting to use Deploy-M.
 - The QR code icon has been updated to a camera icon to make it clearer that this starting point for a new user to begin at.
 - Deploy-M’s Search functionality now has the ability to search on the the data, such as a name, used in a tag field. So, for a User they could now search on a site name e.g. Gianni’s or Pizzeria to more quickly find the correct device in a device cluster.
 - There is now a warning when deleting a device in Deploy-M.
 - Improved the "purpose" string used to ask the user permission to access location data.
 - Improved usability and styling to give an improved look and feel
 - Deploy-M now provides a pre-populated list of suggestions for tag values where appropriate. This provides suggested terminology for users to select when tagging a device in the field and will hopefully deliver more consistency in tagging descriptions.

Bug Fixes

- Platform
 - Device Cluster Downloads now support leading zeros in tags.
- DeployM
 - Users can now clearly see any Configuration tag in DeployM as it is being typed.
 - It’s now easier to view, scroll and select from the Language selection list in DeployM on iPhone.
 - Fixed issue when editing the tags out of order (for example - editing tag 3 before tag 1) where the “new tag” would incorrectly become the first tag instead of the third tag.

Additional Resources

- EULA
 - Uploaded new EULA doc for Pelsis EVS Rodent clients.

=====

Release Date

- November 22, 2023

New Features

- The following changes have been completed to allow EverSmart Alert to meet demands for a “push button” service request. This solution is an MVP and is at an Alpha status.
 - EverSmart Alert now supports One-Button alarm sources. Initially this will be with Smilio A devices, but other hardware devices are being looked at and could be considered based on the use case.
 - Any of our Smilio A devices can now be configured as a 1-button device with support for Service Requests (Push Button requests).
- IoT Monitor
 - We now show the faults from the Indoor Foot Traffic devices on the Overview page. This provides better visibility/awareness so that end users can more easily find, and address hardware issues reported by these sensors.

Feature Enhancements

- IoT Monitor:
 - Device Health no longer reports devices as “Unhealthy” when they are not visible in the UI.
 - Change how IoT monitor interprets device health from Smilio A devices. To ensure IoT Monitor correctly shows healthy devices as healthy, Intermittency is no longer used as a metric for these devices when determining device health. We now handle Smilio device health as a special use case.
 - Poor Signal to Noise ratio is no longer a primary metric for device health as some amount of weak connectivity is expected in real world environments.
 - Other minor improvements in EverSmart include:
 - Renamed field “Missing Records” as “Data Loss”
 - Renamed field “Total Records” as “Expected Records”
 - Added “Realtime” tab
- Platform Authorization
 - A show/eye icon has been added to the password input field on login so that end users may now choose to unmask their password when typing it.

- To improve the login screen, the Organization (Optional) field is no longer displayed on the log-in screen.
 - Login UI now displays which "special characters" are allowed and properly allows/disallows special characters as indicated
- Suite App
 - We've added a new menu item in the "hamburger" menu of the Suite App. "Exit to Console" is an advanced menu item that now appears at the bottom of the menu. Users can click on this link to exit directly to the Microshare Management Console with all of the usual advanced features. To return to the Suite App sandbox, users can either use the "back" functionality in their browser, or they can click on the "Dashboard" item in the top menu bar, or they can click back on the Suite App icon.
